Anna Topalidi

Ruby on Rails developer

After 30 I changed my profession. From Top Retail Manager to IT. It was a fascinating way. Challenging and interesting. And I believe I have done everything right.
I have a little experience in frontend development. At the moment I'm looking for a job as Ruby on Rails developer because I like it. And I want to become a Ruby developer.
In my free time I am fond of trading.

Projects

1. BBQ_app – Application for creating events, inviting friends to the event, for communication within the event, for sending information about the event.

2. Askme – The app where you can ask questions and get answers

3. Who Wants to Be a Millionaire? – Users answer a series of multiple-choice questions to win cash prizes. Users are given a question, they can answer it, and they can choose a clue. The amount offered increases as they answer more and more difficult questions.
