Anna Topalidi

Ruby on Rails developer

I made a career in the Retail sector, became a young and successful manager at the age of 22. Switched to IT and started my way here, so that in a few years I could grow a lot of cool specialists.
I took courses, but I did a lot on my own. Did a lot of interesting projects. Looking for a job as a Ruby on Rails developer in a team of professionals.

Projects

1. BBQ_app – Application for creating events, inviting friends to the event, for communication within the event, for sending information about the event.

2. Turbo Chat – Chat for communication with rooms.

3. Askme – The app where you can ask questions and get answers

4. Who Wants to Be a Millionaire? – Users answer a series of multiple-choice questions to win cash prizes. Users are given a question, they can answer it, and they can choose a clue, or they can claim the prize. The amount offered increases as they answer more and more difficult questions.

Employment history
